

Five Critical Considerations for Network Access

Deploy and Manage Your LAN and Mobile Devices with Cisco ONE™ for Access

Manage your switching structure as a single, converged component.

Provide secure access with one management system and policy for wired and wireless networks.

Offer an uncompromised user experience in a highly secure and feature-rich infrastructure.

25%

Lower TCO over 5 years with Cisco ONE for Access¹

CISCO ONE FOR ACCESS

Where can I get the performance, control, and security for wired and wireless access that my business needs?

Cisco ONE for Access provides:

Centralized network access policies for wired and wireless networks

Network analytics and quality of service tools to improve performance

Sophisticated access control that safeguards your networks

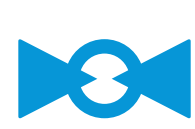

Protect your investment with license portability.

CISCO ONE FOUNDATION FOR SWITCHING

How can I securely connect and manage users and devices in my organization?

With Cisco ONE Foundation for Switching you can:

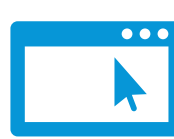

Centralize network access policy management for consistent, secure user access

Authenticate and authorize users or devices with a single policy and guest portal

Connect users with capabilities for Layers 2 and 3 switching, mobility, security, application visibility, segmentation, and QoS

Use one management platform for wired, wireless, and VPN users and devices

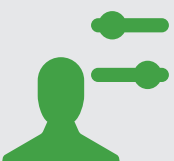

CISCO ONE CAMPUS FABRIC

What if I want to grow my business or support mission-critical operations?

Cisco ONE Campus Fabric lets you:

Scale your network for business expansion with advanced Layer 3 features

Segment your network for security, compliance, and complex business processes

Conserve bandwidth and improve network efficiency with advanced multicast capabilities

CISCO ONE FOUNDATION FOR WIRELESS

How can I provide a business-class Wi-Fi network that supports mobility and BYOD?

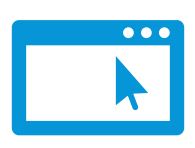

With Cisco ONE Foundation for Wireless, you can:

See and manage applications and traffic on your network with full visibility

Proactively manage wireless devices and users with a single network policy

Simplify network deployment, operations, and management with one solution for wireless and wired

Reduce expenses, simplify switch and access point deployments, and improve security across your network.

CISCO ONE ADVANCED MOBILITY SERVICES

What's the best way to create personalized mobile experiences for my customers?

Cisco ONE Advanced Mobility Services can help you:

Create rich customer engagements with context-aware mobile content

Interact with users through push notifications and wayfinding services

Gain insight into user behavior and improve operations with Wi-Fi-based location analytics

Integrate with other applications for more customized value creation
