Wyse virtualization software is built into Wyse cloud clients and addresses limitations previously found in virtualization, enhancing the user experience, reducing network bandwidth needs and expanding server scalability.

Wyse vWorkspace

vWorkspace enables the delivery of applications and desktops to users based on their unique needs. Organizations can maximize value and reduce complexity by deploying, monitoring and managing a blend of hosted VDI, RDSH and application virtualization from a single pane of glass. Integration with native Microsoft technologies significantly reduces the amount of storage required in support of the desktop virtualization infrastructure, increases provisioning speed and ensures a quality user experience. vWorkspace Advanced Targets allow the creation of granular, context-aware assignments which organizations can leverage for increased security. User access can be defined in many ways including two-factor authentication, trusted entry point, client type or version, user, group, OU, IP, name, day of week/time of day and other variables.

Wyse WSM™

Wyse WSM provides the local processing power of a PC with management and security benefits of your private cloud. WSM offers full PC desktop functionality without complexity by streaming everything a user needs – operating systems, media-rich applications and documents on-demand to Dell Wyse cloud PCs or diskless PCs.

WSM is designed to scale from small, single server systems for an individual office or classroom to high-availability, multi-site deployments with centralized management. WSM is easy to install and integrates seamlessly with virtualized application and desktop technologies from Citrix, Microsoft or VMware when full PC functionality at the desktop is required.

Wyse TCX Suite™

Wyse TCX Suite virtualization software offers an outstanding user experience available over virtualized environments by enabling desktop and mobile users to run diverse multimedia formats (including Flash), use multiple monitors, plug-in USB devices and run voice applications.
