### Features

- Provision on Public, Private and Hybrid Clouds
- Single or Multi-Tenant Deployment
- Manage Resources, Applications, and Users
- Flexible REST API and Reporting
- Demand Driven VM Scaling and Sizing

## Scale and Resilience

Provision on any cloud or hypervisor, speeding time-to-deployment by eliminating costly engineering. The platform is highly scalable and resilient and can be distributed across data centers.

## Extensible and Easy to Manage

Provision and manage using a single pane of glass for visibility across your entire organization. Unify cloud, applications, data and user management to simplify the entire IT systems lifecycle.  Be compliance ready, with comprehensive reporting and auditing features. Take advantage of the powerful API to extend the solution and integrate with your own provisioning, management and billing systems.

Use the Web Application or integrated API to execute and monitor the automated workflows and tasks required to manage the Hypervisor, Virtual Machine, Windows OS and Active Directory application and user elements of the cloud technology stack.

## Get Started

A couple of simple steps to get started:

- Select Platform: Public, Private or Hybrid Cloud
- Select Service Type: Server Workload, AppService or Workspace
