

Why Pair Symantec and Office 365?

The next generation of threats

No matter the size, your organization can be a prime target for cyber attacks. With almost a million new forms of malware created each day¹, you need layered security to stay protected.

The problem

In its default configuration, the security features of Office 365 are not up to the task of keeping your organization safe. They lack superior threat protection features to combat problems like data breaches, rogue access, and targeted attacks across your endpoints. With over 348 million identities exposed by these attacks in 2014¹, you can't afford to simply ignore the problem.

The solution

Symantec has designed solutions that add a layer of robust security, so that Office 365 can be used to its fullest capabilities — while minimizing the fear of vulnerability.

Symantec proactively protects its customers using their *Global Intelligence Network*. This system is fed by millions of inter-connected computers on Symantec service and offers the most up-to-date threat protection available.

Symantec makes securing Office 365 SYMple

Decrease complexity

Comprehensive Symantec security solutions for Office 365 seamlessly integrate with, complement, and enhance the built-in security that is included with Office 365.

Super SYMple

Available as a cloud-managed service, no additional hardware is needed. Setup only takes a few minutes, and updates occur automatically, so you always have the latest and greatest in security.

Easy onboarding

Easily invite users to enroll their devices via email, or allow them to self-enroll to get started with always-on and updated security within five minutes.

Bundle Symantec Cloud products with Office 365 for the total security package

Email Security.Cloud

Messaging security done right. Built with self-learning capabilities, Email Security.cloud provides 100% protection against all email attacks. Supporting Microsoft Office 365, Google Apps, on premises or hosted Microsoft Exchange, and other mailbox services, it protects both inbound and outbound messaging. By removing the complexities that can come with an on-premises solution, Symantec has delivered email security that is both easy to deploy, and cost effective to maintain.

Advanced Threat Protection: Email

A unified solution that uncovers and prioritizes advanced attacks entering your organization through email by adding Symantec Cynic™ cloud-based sandboxing, spear phishing protection. Symantec directly leverages machine learning and ongoing investigations by research analysts into new targeted attacks to provide detailed reports on email attacks targeting your organization.

Policy Based Encryption Advanced

Automatically safeguards the security and privacy of sensitive data you exchange with customers and business partners via email. By choosing a hosted encryption solution, you can start protecting your sensitive information in days – not months – and offload the cumbersome task of managing digital certificates and encryption keys.
