MSP BRIEF

Why choose HYCU for data protection?

Discover what makes HYCU Protégé, a visionary Data Protection as a Service platform, unlike anything you—or your customers—have ever experienced.

We know how painful it can be to protect complex, hybrid environments with legacy data protection solutions.

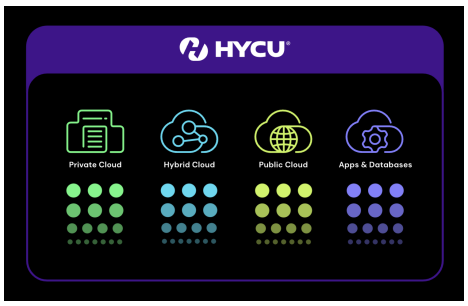
That's why we designed HYCU differently.

HYCU is the only Data Protection as a Service (DPaaS) provider with purpose-built solutions for all your customers' workloads that can be managed in a single pane of glass.

We make it possible for you to seamlessly manage, protect, and recover data across your customers' environments wherever their data sits—in hybrid environments, on-prem, multi-cloud, SaaS apps, or cloud native apps. HYCU offers service providers an agentless experience with zero learning curve.

Without HYCU

With HYCU



Our approach will help you increase average customer revenue while improving customer trust and loyalty. Plus, our simple pricing makes us easy to sell and multi-tenancy means we're perfect for an MSP model. With HYCU, you will be able to:

Increase average customer revenue

HYCU Protégé is 100% SaaS, which means it is effortless for you and your customers. Give customers the high-value data protection services they want without creating more headaches and complexity.

FOR CUSTOMERS

- ROBUST, FLEXIBLE HYBRID BACKUP AND RECOVERY
- PURPOSE-BUILT FOR SECURE AND SIMPLE MULTI-TENANT APPLICATIONS
- POWERFUL RANSOMWARE PROTECTION
- ELIMINATE NEED FOR UPGRADES AND MAINTENANCE
- COST-EFFECTIVE HYBRID-CLOUD DISASTER RECOVERY

FOR MSPs

- SIMPLE PRICING
- INCREASED AVERAGE CUSTOMER REVENUE
- IMPROVED CUSTOMER TRUST AND LOYALTY
- MULTI-TENANT SUPPORT

MSP BRIEF

HYCU

Why choose HYCU for data Protection?

Improve customer trust and loyalty

With HYCU Protégé, customers will be confident you're providing comprehensive backup and reco very for their critical data and apps. Increase customer loyalty by becoming an indispensable part of your customers' IT and digital transformation strategies.

Simplify selling

HYCU's MSP model offers monthly consumption-based billing to align with your managed services business.

Benefit from built-in multi-tenancy

HYCU makes it simple to securely set-up and manage multiple customer environments from a single interface.

A new era in data protection is here with HYCU Protégé

As an MSP, you are responsible for data security and availability—and your customers' expectations are uncompromising and environments increasingly complex. With HYCU Protégé, you can solve your customers' biggest data protection challenges with:

Simple, automated backup and recovery

Multiple backup solutions covering multiple environments can mean a lot of headaches. Our single-pane-of-glass approach allows you to simply manage all your customers' backup and recovery needs. Automate the protection and recovery of applications in one click and avoid partially recovered apps with application-consistent backups.

Trying to protect hybrid cloud environments with traditional backup approaches usually requires lots of manual effort, multiple solutions, and dedicated hardware and storage. With HYCU, there are no agents, sizing exercises, or constant software updates.

Rapid ransomware recovery

Providing protection against ransomware is a top challenge. As the threat of ransomware grows, many organizations focus on detecting and stopping attacks—but not enough focus on creating immutable, air-gapped backups with rapid recovery capabilities to avoid costly downtime and ransoms. HYCU makes ransomware protection second nature.

Next-level compliance

Data protection can't be delivered in a black box. HYCU Protégé provides comprehensive visibility and assures customers their data is actively compliant with GDPR, HIPAA, legal holds, and other regulations. Ensure data is quickly recoverable in the event of an attack and avoid paying costly ransoms with secure, ransomware-proof backups and granular recovery objectives.

Why choose HYCU for data Protection?

Give customers peace of mind

HYCU's easy-to-manage multi-tenancy means your customers will never worry that their data is commingled with other companies' data. Even your customers from highly regulated industries will trust in your ability to deliver seamless, secure backup and recovery.

Innovative data protection solutions that free you from the burden of legacy tools

When you partner with HYCU, you get more than just backup for your customers—you get an entire set of data protection use cases to deliver more value to them, all without adding more complexity for you to manage.

Backup

Make the complexity of managing hybrid cloud environments effortless with our unified, agentless, application-aware Backup as a Service solution.

Disaster recovery

Conquer any catastrophe with ease thanks to our agentless, cost-efficient, unified DR solution, designed to protect and recover data wherever you need it.

Hybrid & multi-cloud

Stay in control with effortless mobility and migration capabilities. Create a cost-effective pathway to the cloud or bring workloads back on-premise. Manage it all with our transparent, single-pane-of-glass interface.

Security & compliance

Protect your clients' data without sacrificing security with our unique, security-first architecture that provides 100% data sovereignty and privacy.

Ransomware protection

Effortlessly safeguard your customers' data and applications from cybercriminals with immutable, air-gapped backups and rapid recovery.

Stand out with R-Score™

Help customers identify gaps in their ransomware preparedness by offering an R-Score™ Assessment Tool. MSPs can leverage this unique service to deliver more value to their customers. Learn more here.
