End Point Detection and Response (EDR)
- Monitors and analyzes network traffic in real-time.
- Alerts you to unknown threats.
- Helps you to quickly respond to attacks.

Cross-Product Detection and Response (XDR)
- Provides a breadth of security features in a single interface.
- Integrates data from various sources.
- Helps you to quickly respond to attacks.

**The XDR Advantage**

**Example of an Attack**

An employee in your organization is tricked into clicking on a malicious link.

**How EDR responds:**
- Identifies the malicious link.
- Sends alert to IT department.
- Locks down system to prevent further attacks.

**How XDR responds:**
- Identifies the malicious link.
- Sends alert to IT department.
- Locks down system to prevent further attacks.
- Provides additional context and response recommendations.
