novacoast

Fortify Remediation

We make the best app & code scanner better.

Fortify is best of breed in securing the development life cycle—from code to deployment to production. But tools rely on management and maturity. Novacoast partners with Micro Focus to provide development and application security services, helping companies mature their SDLC, Devops and overall security.

After 10 years in software development and 20 in security, Novacoast can expedite delivery while increasing security. We offer **Fortify deployment**, **architecture & maturity assessments**, **patching & upgrades**, **manual review & prioritization of vulnerabilities**, **code remediation**, and **maturity support including custom integrations into the SDLC & Devops pipeline**.

Fortify Services

Pick à la carte tasks from the services above to be billed in a **Time & Materials Model**. This most flexible option allows the customer to define engagement over period of time.

Supported Languages

Novacoast supports custom development vulnerability remediation for Fortify in many languages, including:

ABAP/BSP, , Apex, ASP.NET, C# (.NET), C/C++, ASP (with VBScript), COBOL, ColdFusion CFML, HTML, Java (including Android), JavaScript/AJAX, JSP, MXML (Flex), Objective C/C++, PHP, PL/SQL, Python, Ruby, Swift, T-SQL, VB.NET, VBScript, Visual Basic and XML

Managed Services

Our **Fixed Cost Co-Managed Model** allows Novacoast to effectively work as an extension of the customer's development and security teams to offer:

- Scheduled Scans
- Prioritization of Vulnerabilities
- Patching/Upgrades of Fortify Servers/Applications
- Integrations with Various Security Tools & Platforms
- Development Services for Remediation of Vulnerabilities

Staff Augmentation

Novacoast can also offer on/off-site staff augmentation for any of the services listed above billed on a T&M basis. The minimum staff augmentation length is 2 weeks of services.
