/ month

## Ambient Room Monitoring

Spikes in temperature and humidity can cause damage to equipment, materials and goods. Monitor ambient conditions of rooms to ensure inventory protection.

## Outdoor Temperature Monitoring

Temperature monitoring for sheds, barns and other outdoor environments to protect livestock and other valuable assets dependent on temperature conditions

### COMING SOON

## Indoor Tamper

Artwork, equipment and other valuable items that should not be moved can be outfitted with a sensor that will send an alert when the object is touched or moved.

## Perimeter Monitoring

Around-the-clock monitoring for outdoor gates. Detects if a gate has been opened or closed. Receive notifications when open/close events occur.

## Smoke Detection

Wireless smoke sensors with 3+ year battery life are ideal for staying compliant without the complexity of wiring. Superior range, easier install and more secure than Wi-Fi.

## Door Monitoring

Get notified when a door is opened or closed for a length of time. If a monitored door has been open for 10 minutes, a text message alerts security to close the door.

## Motion Detection

Detects the movement of people, animals and objects indoors in real time while monitoring ambient temperature and light to track occupancy and ensure comfort.

### COMING SOON

## Door Barricade Monitoring

Increase staff protection during dangerous intruder events. Know when a lockdown is triggered, remotely visualize the building and take swift action. Works with Nightlock.

## Leak Detection

Avoid costly repairs. Receive alerts when water is detected in areas where appliances are present, such as water heaters, sinks, utility closets and bathrooms.

## Room Occupancy

Determine room utilization with wireless motion sensors that detect the length of time the monitored area is occupied at any given time.

## Sound Monitoring System

Measure peak and average sound levels in indoor environments. If predefined sound trigger levels are exceeded, text and email notifications are sent.

## Indoor Luminosity

Conserve energy with indoor light monitoring. Sensor will determine if a room has the light on or off. In addition, it provides the overall luminosity reading.

## Panic Button Alert System

Ensure employee and customer safety. Place buttons on walls, under desks or on lanyards when activated text message and email alerts are sent in case of emergencies.

## Service Request (Single Button)

When stock needs refilling, staff and customers alike push the button next to the items. An alert is sent, and an order for replenishment is sent to the appropriate party to fulfill.

## Waste/Bin Monitoring

Designed for indoor or outdoor bin status detection. Wireless sensor retrofits to your existing bins. It detects and alerts on statuses for full/empty, flame risk or inclined (fall).

**COMING SOON**

## Desk Occupancy

Sensors are placed underneath tables to determine when and how long people are sitting at a table or desk. Useful when trying to determine how often space is being utilized.

**COMING SOON**

## Connected Rodent Control

Eliminate the expense from outside pest companies to monitor rat and mouse traps. Wireless traps notify the facility management team when a trap needs to be emptied.

## Extreme Temperature Monitoring

Available for ultra-low temperature readings in subzero freezers that store inventory at -80 and colder. Monitoring these temperatures is essential for content preservation.

**COMING SOON**

**Special Pricing**

## Feedback/Survey Monitoring

Place a small, customizable connected dashboard or button in any area where customer feedback is essential. Collect feedback effortlessly.

## Gas Monitoring

Wireless sensors measure CO2 and any other gases' parts per million (PPM). These are typically specially-built sensors that are designed for particular use cases.

## Service Request (Double Button)

2-button sensors to place in any facility for requesting the replenishment of items or of services such as IT and maintenance. A simple push is all you need to call for a request.

## Tank Level Monitoring

Sensors are used for measuring grain bins, water levels and locations where the sensor is above a surface that may rise or fall over time. Receive alerts and reports about the levels.

**To place your order, contact your sales representative.**

depending on the solution. Gateway is universal and can work with all sensors.

\*One gateway is required for an additional \$30/month. Up to 20 sensors can be monitored with one gateway
