

Use the Microsoft 365 Security Audit to grow your business.

The Microsoft 365 Security Audit is an essential Partner tool like no other.

Easy to Use as part of your Pre-Sales Strategy:

- Lightweight onboarding
- Audit scheduling

Helps you Gain Customer Confidence (and become the Trusted Advisor):

- No customer commitment required to run the audit
- Identify issues with tenant(s)
- Recommend solutions/bundles to help remediate the issues

Proof of our Commitment to Partner growth:

- Zero cost to the Partner
- Partners may add this to their portfolio as a profitable service

The Microsoft 365 Security Audit can also help you retain customers. How?

- **Continuous Monitoring**
Can schedule the audit on a daily basis
- **Continuous Detection**
Automatically sends an alert every time a risk is identified
- **On-Demand Remediation**
Remediate the problems that are discovered with a single click
- **Business Review**
Integrate SA reports as part of the partner-to-customer bi-yearly/yearly review cycles

Don't sacrifice security in the pursuit of greater productivity.

AppRiver's Microsoft 365 Security Audit continuously analyzes mailbox settings to identify vulnerabilities and determine whether an email account may be compromised. That includes unauthorized mailbox forwarding rules, excessive administrator permissions, and more. Further, it can mitigate or remediate most issues without administrator intervention.

The Security Audit checks the admins, users, mailboxes, and rules on a Microsoft 365 tenant for vulnerabilities so you can help resolve unidentified issues before they become crises for your customers.

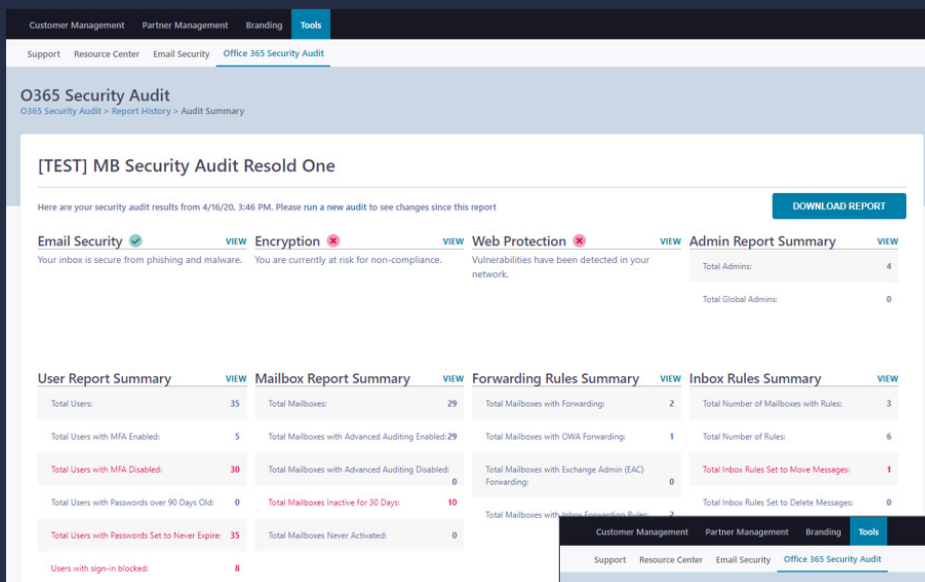

Continuous monitoring and proactive remediation of compromised Microsoft 365 email accounts

The audit analyzes mailboxes for:

- Mailbox permissions
- Inactive mailboxes
- Forwarding settings
- Inbox rules
- Passwords
- Multi-factor authentication
- Audit scheduling
- Optimization

Run the audit directly in the Secure Cloud platform. The audit provides remediation guidance. Plus, our longstanding relationship with Microsoft gives us unique insights into announcements and product changes.

Provides granular security awareness

Conveniently schedule routine audits

Easily configured and managed in Secure Cloud

Tailored for your domain and/or tenant
