

The Secure Network as a Service

Say goodbye to the legacy hardware of the past and discover the benefits of our leading Secure Access Service Edge (SASE).

2019

The way we work has permanently changed. Employees are working outside of the corporate office and organizations are increasingly relying upon cloud technologies. With an ever-expanding network on the horizon, the traditional hardware-based security appliances are no longer adequate.

At Perimeter 81, it is our mission to simplify secure network, cloud and application access for the modern and distributed workforce. To do so, we have built a holistic SASE (Secure Access Service Edge) solution that provides both customizable networking and the highest levels of security.

Unlike hardware-based legacy VPN and firewall technology, our scalable SaaS solution offers greater network visibility, seamless onboarding and full integration with major cloud providers, giving companies of all industries and sizes the power to be fully mobile and completely cloud confident.

The Benefits of Our Award-Winning SASE Solution

Build, manage and protect your network with total ease.

Deploy Your Network in Minutes

Instantly deploy secure cloud gateways, create multi-regional networks and install client applications with our single-click interface.

Gain Complete Network Visibility

If there's any unusual activity, we'll help you identify it. Easily manage team settings and view employee network access all in one place.

Dramatically Reduce Costs

Our service eliminates the need for expensive external hardware installation, so you can scale your network quickly and cost-effectively.

Quickly Scale Without Limits

With more than 30 data centers worldwide, we ensure your network has high reliability and availability at all times.

Complete Network Security

Fully secure your most valuable resources from our multi-tenant cloud.

Secure Cloud and Network Access

Ensure user-centric and adaptive, policy-based network access (Layer 3) to on-premise resources, SaaS applications, and cloud environments.

Cross-Platform Endpoint Protection

Enable single sign-on access and two-factor authentication across iOS and Android devices, as well as PC and Mac desktops.

Zero Trust Application Access

Reduce the attack surface. Implement zero trust, fully audited access to web applications (Layer 7) via HTTP/S, SSH, RDP, or VNC, without an agent.

Site-to-Site Interconnectivity

Bridge the gap with fully customizable networking. Interconnect your cloud environments and different network branches.

"We see Perimeter 81 as a true visionary and real leader in the network and cybersecurity space. With their highly intuitive and feature-rich SASE solution, they are at the forefront of a critical cybersecurity market transformation, where cloud-native, holistic services are now more important than ever."

- Michael Kenney, VP of Strategy & Corporate Development at Ingram Micro

About Us

Perimeter 81 is a leading Secure Access Service Edge (SASE) provider that has taken the outdated, complex and hardware-based network security technologies, and transformed them into one unified, scalable and easy-to-use software solution — simplifying secure access for the modern and distributed workforce. Perimeter 81's clients range from small businesses to Fortune 500 corporations across a variety of sectors, and its partners are among the world's foremost integrators, managed service providers and channel resellers.

Certified SOC 2 Type 2, GDPR, HIPAA and ISO 27001 Compliant

We adhere to the highest standards of software security compliance, so you can rest assured that your organization's data remains fully protected.
