

Delivering the Highest Levels of Compliance, Control & Visibility

SECURE BY DESIGN

Venn ensures that firm applications and data are only accessible through the platform. It employs a Zero Trust security architecture to continually confirm user authorization, device health and to isolate work data and network traffic.

ACTIVE COMPLIANCE

Venn transforms written cybersecurity compliance policy into actively enforced technical controls, complete with readily exportable usage data that saves IT and compliance teams time and aggravation during routine or unexpected audits.

EMPOWERED USERS

Venn keeps users safe and compliant across their devices, allowing them to stay focused and in the Zone throughout the day. No more inconvenient and unsafe workarounds because of slow virtual desktop performance and compatibility challenges.

CONSOLIDATED INFRASTRUCTURE

Venn reduces cost and complexity by eliminating virtual desktop infrastructure, whether hosted on-premises or with a service provider. In addition, Venn's LocalZone™ technology removes the need for one-off security and management point solutions like Mobile Device Management (MDM), VPNs, and more.

Virtual Desktops

Virtual desktops sacrifice performance and usability of work applications and data for security and compliance

With Venn, users work locally, seamlessly and securely on the device of their choice, anywhere – always staying in the Zone.
