Want Faster and Secure Connections for Your Remote Workers?

5 Steps for Building Your SASE Roadmap

Millions of people shifted from working in the office to working remotely, which has resulted in lost productivity due to overloaded VPN connections that slow access to critical cloud applications.

With virtually every app delivered in the cloud, why are remote workers sending traffic through the VPN to begin with? Move your security to the cloud and allow users to connect directly to cloud apps without the VPN. Take these 5 steps when building your SASE cloud migration.

1. **TAKE INVENTORY**
   - Take inventory of on-prem proxy appliances and phase out hardware with equivalent network security services in the cloud.

2. **CONSOLIDATE VENDORS**
   - iboss replaces existing on-prem security solutions, such as proxies, with a cloud-native SASE platform offering greater security coverage at a reduced cost.

3. **ADOPT ZERO TRUST**
   - Increase security by moving to a user and role-based security model that allows security policy to be applied to all connected devices regardless of user location.

4. **ELIMINATE VPNs**
   - Take inventory from VPNs by shifting traffic to a SASE platform which provides security in the cloud and allows users to connect directly and securely to all cloud apps.

5. **VISIBILITY & CONTROL**
   - Look for a cloud platform that provides core security functions in the cloud so that protection is always in place for all communications regardless of user location.

**Top 4 Priorities for CIOs in 2021**

These four business initiatives rose in importance due to socio-economic pressures.

- Increase Cybersecurity Protections: 57%
- Improve Customer Experience: 57%
- Transform Existing Business Processes: 56%
- Increase Operational Efficiency + Productivity: 56%

**Build Your Roadmap With iboss**

**Journey to the Cloud**

iboss replaces existing on-prem security solutions, such as proxies, with a cloud-native SASE platform offering greater security coverage at a reduced cost.

**Consolidate Vendors**

- Scalable security including SWG, CASB, Malware Defense and DLP as contracts end for on-prem proxy infrastructure and network security.

**Go Down the Road to Zero Trust**

With iboss, you can start the transition to Zero Trust which increases security, reduces costs, and allows users to connect directly to cloud applications from any location.

**Eliminate the Need for VPN**

Rapidly move cloud app traffic from the VPN to iboss giving users their own secure connections to cloud applications, without compromising security and control. Reduce the burden on your data center and increase user productivity.

**A SASE Platform Like No Other**

Delivered with containerization at its core, iboss isolates all traffic as it’s secured within the cloud service. This architectural design makes it the differentiator in terms of security, performance, and capabilities.

**Traffic from Dedicated IP Addresses**

Jump-start your SASE transformation with iboss and experience the future of cloud security today.

Learn more about the platform at www.iboss.com

iboss is a cloud security company that provides organizations and their employees fast and secure access to the Internet on any device, from any location, in the cloud. The iboss SASE cloud platform eliminates the need for traditional network security appliances, such as firewalls and next-generation firewalls, which often struggle to protect a cloud-first, mobile world.
