

# The HubStor solution brief

Helping enterprises modernize data protection and content archiving

# A full suite of cloud data management solutions

Data sprawl is real. And so is product sprawl. They are messy, inefficient, and hampering compliance and security. With HubStor, you can manage all your backup and archival on a unified platform, in a cloud location of your choice, giving you the power to centrally store, access, and protect the information you need.

## Backup

Data and virtual machines are vital.

They are also surprisingly vulnerable to accidental deletions and malicious attacks by bad actors. HubStor's Backup-as-a-Service (BaaS) provides unified backup for virtual machines, file shares, SaaS apps, and PaaS cloud storage.

- **Simplify** your 3-2-1 data protection architecture.
- **Optimize your time** with a backup solution that is easy to use and has a fully-managed SaaS backend.
- **Reduce backup costs** with HubStor's simplified pricing model.

## Tiering

Manage file system storage growth while protecting file data.

HubStor's seamless storage tiering virtualizes low-touch, inactive data taking up space in your primary storage. The best part? Users and applications continue to see and interact with the tiered data with no disruption.

- **Define policies** to automatically tier older data to the cloud.
- **Recall tiered items** without disruption when a user or application accesses data.
- **Configure local caching** to optimize retrieval speed and limit recalls to the cloud.

## Archiving

Meet your archival requirements with HubStor

HubStor combines military-grade security with the economics, elasticity, and convenience of the cloud, giving you unlimited access to a rich archiving experience without the hassles of operating the infrastructure.

- **Control costs** with low monthly storage fees in the cloud, with powerful search and control.
- **Query metadata** and run scoped full-text indexing at scale.
- **Analyze** storage costs and charge back consumption to projects, clients, or departments.

## Journaling

Record communications for legal and regulatory compliance

Create a record of corporate emails and other messages, including Office 365, Exchange Server, Microsoft Teams conversations, and SMS/MMS, and multiple instant messaging platforms to meet compliance and e-discovery requirements.

- **Meet legal requirements** for message preservation, discovery, and collection.
- **Apply legal hold** to searches and create cases, or place users or groups on legal hold.
- **Export messages** to PST files, mailboxes, or file paths.
- **Configure local caching** to optimize retrieval speed and limit recalls to the cloud.

## Compliance

Simple delivery of immutable records retention in the cloud

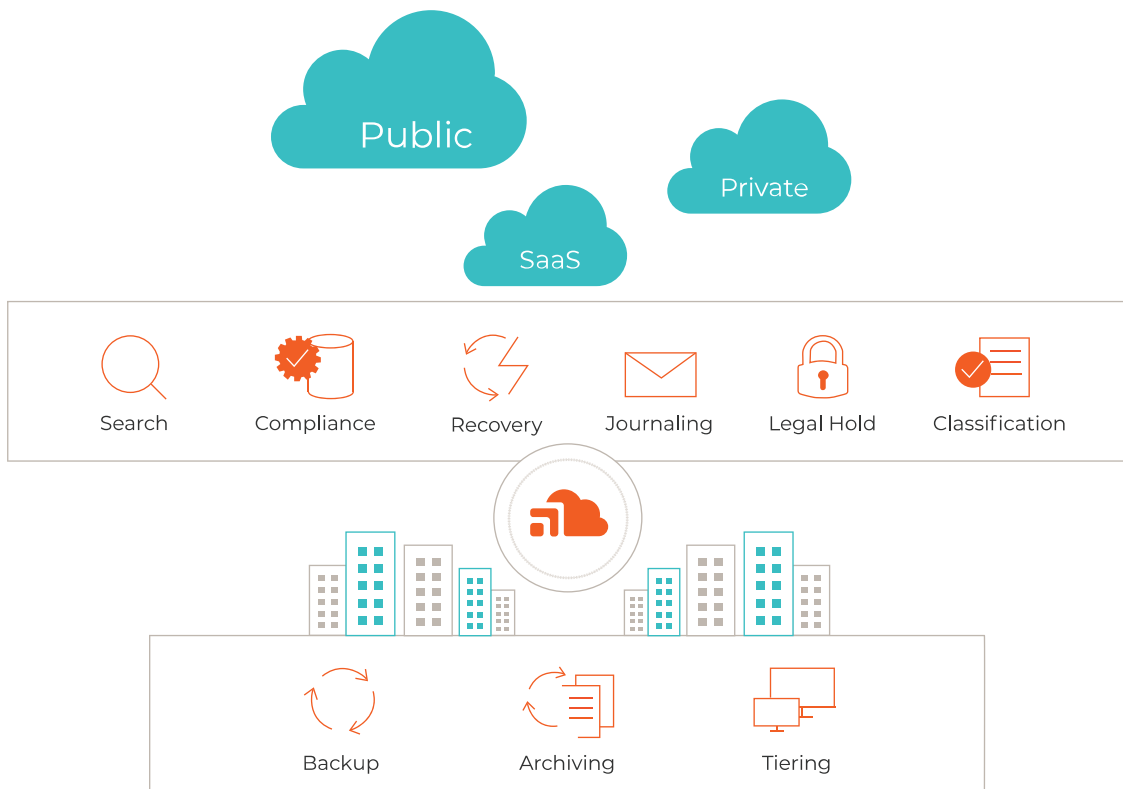

Meet regulatory requirements with cost-effective, easy-to-consume immutable compliance storage for messages, scanned documents, call recordings, medical images, genomics data, etc.

- **Apply retention periods** with item-level policies.
- **Preserve content** in its original format with data integrity validation.
- **Report** on and defend your record of compliance with immutable activity audit logging.

# The platform that unifies backup

Data is the life-blood of your business. It's how you innovate, how you grow, and how you serve customers day-to-day.

HubStor gives you a unified SaaS approach to your backup and archival needs.

*"The HubStor platform simplifies our adoption of Microsoft Azure for protection of our unstructured data while adding a data management and security layer to the cloud which functions conveniently as Software-as-a-Service."*

**Gerrit den Hoed**  
Infrastructure Architect, De Goudse N.V.

# Platform features

## Fully searchable data lake

Manage and search any type of data. Save searches, sort results, and view results with hit highlighting.

## SOC 2 compliance

HubStor is SOC 2 compliant and maintains security that meets the strictest of enterprise requirements.

## Fully managed SaaS solution

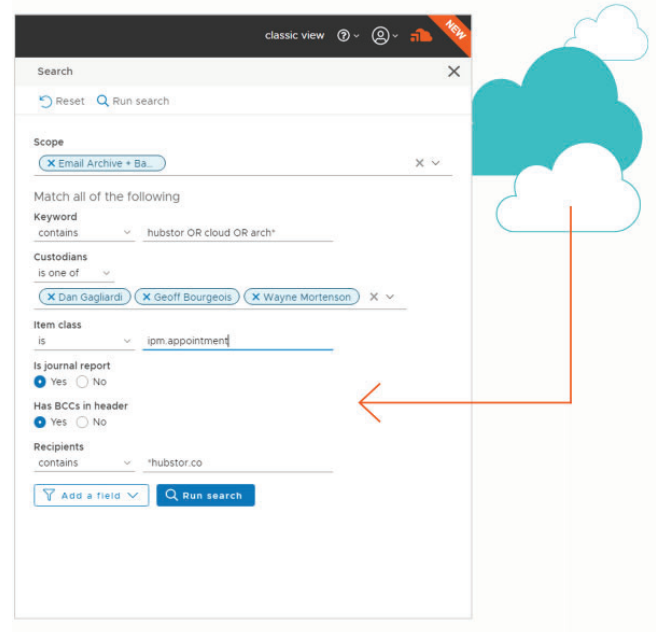

Enjoy the convenience of expert oversight for your tenant that reduces the demands on your IT staff.

## Deploy in any Azure region

Choose the Azure region that helps you address the data residency needs of your organization.

## Scalable cloud infrastructure

Pay only for what you use and scale without the procurement, setup and maintenance of new hardware or software.

## Take a closer look at HubStor

HubStor on Azure is a fully managed solution, which means no added hardware and no cloud complexity for you to monitor and maintain. You can run your HubStor tenant in any Azure region for data sovereignty. You can also choose to run HubStor in your own Azure account or use HubStor's.

With HubStor, you and your data are never locked in. You can cancel anytime with no penalties or hassles with migrating data.
