

Secure network solutions

Network management redefined by Comcast Business

Cyberthreats are relentless and ever-evolving as cybercriminals continuously look for network vulnerabilities to exploit. Businesses are a prime target, shouldering an estimated **\$4.24 million in average data breach costs** over the past year¹.

As businesses continue to embrace digital innovation and network transformation, they are looking for ways to mitigate cybersecurity threats while continuing to provide customers, suppliers and employees with convenient, technologically advanced experiences.

Redefining network management

Secure network solutions from Comcast Business combine connectivity, SD-WAN, and advanced security solutions from Versa and Palo Alto Networks to offer integrated Unified Security on-premise and Unified Secure Access cloud solutions that help protect your network. Secure network solutions are powered by ActiveCoreSM, an easy-to-manage digital platform that provides real-time insights and the power to control your network from anywhere, anytime.

Our secure network solutions can help your business:

- Manage its underlying network infrastructure.
- Protect its network and connected devices from breaches and hacks.
- Gain real-time insights into network performance.

Cyberthreat risks are growing

358%

increase in use of malware²

287 days

average time to detect & detain a cyberattack¹
