## Still believe your SaaS data is backed up? It isn't. You need to protect your own SaaS data.

Many IT professionals will be surprised to learn that **SaaS vendors do not include data backup** as part of their service. It's up to you to protect your own SaaS data.

## One Platform to Protect SaaS Data from Growing Cyberthreats

**SaaSAssure powered by Asigra** is a powerful multitenant SaaS-based backup solution to enable comprehensive backup and recovery capabilities for all your SaaS applications. Effortlessly back up Atlassian, Microsoft365, Salesforce and 20 other SaaS applications with more in development. Service providers or their customers can quickly recover data in case of a loss.

## Secure by Design

SaaSAssure protects data from unauthorized actions and ransomware attacks using best-of-breed and proprietary industry-leading security. In addition to **Multifactor Authentication (MFA)**, SaaSAssure includes an industry first feature – **Multiperson Approval (MPA)**. MPA requires multiple people to approve a potentially malicious action from executing in the software, such as deleting a data set. This protects against several forms of ransomware attacks, as well as credential theft, accidental or malicious deletions and insider threats.

Asigra uses globally recognized AES 256-bit data encryption for data in flight and at rest, meeting the most stringent compliance standards.

## At a Glance

### SaaS Data Protection

- Broadest SaaS app coverage
- Data assurance and control
- Risk & compliance mitigation
- Ransomware protection

### Quick Set up & Easy to Use

- From start to protection in under 5 minutes
- Automated backup & restore

### One Console to Manage them All

- Maximize your IT resources
- Dashboard for required actions & notifications
- Multitenant

### Secure by Design

- Industry-first Multiperson Approval (MPA)
- Multifactor Authentication (MFA)
- AES 256-bit encryption

### Flexible Storage Options

- Asigra Cloud Storage
- Bring your own storage (BYOS)
- Data sovereignty

### AI & Data Management

- Data analysis with artificial intelligence (AI) and machine learning (ML) with data export
