

**Forcepoint™**

**FORWARD WITHOUT FEAR**

# Forcepoint™

**FORWARD WITHOUT FEAR**

Modern business depends on safely connecting many different types of users (including mobile workers, office staff, partners, and customers) to all the data sources they need to get their jobs done. Ongoing advances in cloud computing, mobility, and other disruptive technologies create new ways to move your business forward.

Taking advantage of these new technologies is challenging. Insider threats (both accidental and malicious) and targeted attacks make data compromises all but inevitable, while a patchwork of security products create work for overtaxed and under-resourced security teams.

We bring a new approach to security – safeguarding your users, data and networks against insiders and outsiders, throughout the entire threat lifecycle. We protect your data everywhere – in the cloud, on the road and in the office. We protect what's most important to you.

## ▶ **SIMPLIFIED COMPLIANCE, BETTER DECISIONS, STREAMLINED SECURITY**

Forcepoint helps simplify compliance, improve decision-making, and streamline security. Our modular, end-to-end solutions eliminate the waste of managing a patchwork of point products and the avalanche of data they produce. We automate routine tasks, empowering your technology professionals to focus on innovation rather than being distracted by threats or breaches.

## ▶ **A HERITAGE OF PROTECTION**

Forcepoint combines commercial agility and deep governmental expertise, giving us more than 90 years of innovation and experience in making the world a safer place. More than 20,000 customers around the world rely on us to detect and defeat their most determined insider and outsider threats.

## ▶ **FORCEPOINT IS DIFFERENT**

Like no other company, we bring together years of experience and the financial commitment necessary to build and deliver sophisticated, integrated systems. We turn expertise gained on the harshest cyber frontlines into efficient, easy-to-use commercial products. Organizations around the world rely on Forcepoint to reduce risk and handle threats so they can focus their full attention on what matters most to them.

We protect what's most important to you.

Protect your data throughout the threat lifecycle

- DEFEND**  
Protect Users, Data, and Networks  
In the Cloud, on the road, in the office
- DETECT**  
Swift Identification of Breaches  
From insiders and outsiders
- DECIDE**  
Faster, More Accurate Insights  
Aggregate and analyze information from across your organization
- DEFEAT**  
Rapid Resumption of Normal  
Use rich context to drive remediation processes more effectively and efficiently

# A unified, cloud-centric security platform to safeguard users, data and networks

Forcepoint's unified, cloud-centric security platform integrates with your existing infrastructure to help you safeguard your users, data and networks. Powered by our TRITON® 4D Platform, our ACE shared security services work closely with our global ThreatSeeker® Intelligence Cloud to provide up-to-the-moment knowledge of the latest advanced threats that is shared across our products.

While our products are modular, integrating through our platform means our solutions can share a common security context, helping to detect suspicious activity and content sooner. The platform also provides better insights throughout the network so you take the best actions to fix breaches and reduce dwell time.

## Solutions backed by the TRITON 4D Platform

### ▶ CONTENT SECURITY

Forcepoint enables your employees to safely communicate and read content received over email, the web and other channels without being attacked by advanced threats. In addition, sophisticated Data Loss Prevention, integrated directly into our security gateways, helps prevent information from being accidentally or maliciously transmitted to places it doesn't belong.

### ▶ INSIDER THREAT DATA PROTECTION

Every moment, your employees accidentally or intentionally create opportunities for breaches. Forcepoint lets you monitor user activity to identify the early warning signs of risky behavior, then detect and block attempts to move sensitive data in and out of your organization.

Our solutions can automatically identify the riskiest users within an organization, based on their behaviors and on how they use data. This unique approach gathers rich context, including recording and playback of user activities before, during and after risky behaviors, giving you the data to take the right actions to protect your business.

### ▶ SECURITY FOR CLOUD

Forcepoint's comprehensive products enable organizations to safely move their business to the Cloud, taking advantage of the latest technologies for mobile users and distributed organizations. We enable your mobile and distributed workforces to take full advantage of Office 365, web applications and email without sacrificing the controls and security you need.

Forcepoint enables you to discover confidential data stored in sanctioned business apps like Box and Salesforce, and to identify risky unsanctioned apps that users access. We even give you the ability to protect the Linux server farms running your applications by detecting potential threats without compromising the performance of your line-of-business systems.

### ▶ NETWORK SECURITY

In today's world, organizations are more decentralized than ever. From a single console, our next-generation firewall lets you reliably enforce security policies across your headquarters, corporate locations, divisions, branches, remote offices and even home offices. It integrates application control, sophisticated evasion prevention and an intrusion prevention system (IPS) into a single, easy-to-deploy solution.
