

► Partnership Overview: Commvault and NetApp

Together, Commvault and NetApp help reduce your IT and data management costs and complexity by eliminating the need for multiple software and hardware products or single-purpose appliances.

Our combined solutions help make infrastructure more efficient and help you more easily manage storage growth. As you migrate to NetApp Clustered Data ONTAP storage, or implement flash storage, Commvault capabilities can seamlessly enable data recovery and offsite data management, turning data protection into a function that serves the business.

Additionally, we provide Commvault IntelliSnap for NetApp, the replacement for SnapProtect. It's data management software that enables snapshot management across cloud, disk storage and tape. Using this solution, you can create, manage and monitor all NetApp hardware snapshots for data protection and recovery operations from a single interface, no matter where they reside.

NetApp

Provides data management and data storage solutions, both hardware and software.

Commvault

Provides data protection software and appliances to help customers analyze, backup, recover, replicate, archive and search data across all storage types.

Our Accolades

Commvault has been named a Leader on the Gartner Magic Quadrant for Data Backup and Recovery Software for six straight years.

Commvault is the only data protection partner validated across all NetApp storage platforms: FAS, E-Series and All-Flash arrays including SolidFire, All-Flash FAS and EF (E-Series Flash).

Challenges Solved

- Need for comprehensive data protection that reduces costs and risks amongst large amounts of data and varying data platforms.
- Pressure to reduce operational overhead and ensure efficient operations and IT capital outlays.
- Requirement for always-on business operations and need for constant data availability, with no loss.

Benefits

- **Streamlined management:** Simplify data management and data protection processes with automation, policies and workflows.
- **Reliability and availability:** Stay online with push-button and application-aware, hardware-based recovery.
- **Simplified restores:** Reduce complexity by restoring point in time and increase efficiency with granular item recovery.
- **Integration:** Realize the full value of your NetApp investment, thanks to deep application, hypervisor and hardware snapshot integrations.
- **Enhanced efficiency:** Enable self-service to reduce the burden on your IT staff.
- **Multi-tenancy:** Support secure multi-tenancy.
- **Off-site data protection support:** Easily send snapshot copies off-site for disaster recovery.
